

How We Work

Licht up your life with us; let f(Licht) make your dream a sustainable reality!

In f(Licht), everyone religiously pursues a simple philosophy: Be minimalist in requirements, and maximalist in performance. The CEO herself strongly vouches for making the lighting solution viable to help everyone decorate their home with lighting environments that allow us to feel the interplay between light and architecture in all its diversity. We put enormous emphasis on providing a personalized solution so that the clients get the best value for every penny invested in the project.

1. SEED STAGE

To pave the way toward an optimal solution that is in accord with our client's dream without threatening solvency, we try to collect subjective information through genial conversation.

2. GERMINATION STAGE

Upon understanding the client's requirements, the design team conducts a REVERSE BRAINSTORMING to develop a digital lighting concept presentation with different illustrating aids to help the client visualize the proposed solution.

SEEDLING STAGE

Upon the client's approval, a thorough search is made to find out or develop (indigenous) the devices that serve the purpose at their best. After that, an efficacious control. The scheme is devised to ensure utmost optimality.

PLANTATION STAGE

In this final stage, a detailed blueprint is provided for installation (on-demand installation service is also available). Periodic on-site physical surveying, commissioning, and telemonitoring all are done to ensure smooth completion of the project. And f(Licht) always tries to deliver the project well within the deadline.

RIPENING STAGE

Client dream project is ready. F(Licht) once again stand tall to its commitment and bring smile in its clients' face. Clients feel contented, f(Licht) fills gratified.

NOURISHING STAGE

The client starts enjoying the finished projects, but f(Licht) always stays in touch with the clients, not because f(Licht) is not confident with the reliability of their products or installation, but they know staying in touch with their client always give the client peace of mind.
